## **Chapter 1: Introduction to ASU**

## **Purpose of ASU**

The Authorization/Subscription Utility (ASU) implements a User Class Hierarchy which is useful for identifying the roles that different users fulfill within the hospital. It also provides tools for creating business rules that apply to documents used by members of such groups. ASU provides a method for identifying who is AUTHORIZED to do something (for example, sign and order). Future versions of ASU will provide tools for identifying a group of persons who SUBSCRIBE to receive something (for example, the Medical House Staff Officer may receive an alert to cosign all Schedule II narcotic orders, etc.). ASU originated in response to the long recognized demand for a means of implementing the "Scope of Practice" model, which was first discussed during the analysis and design of OE/RR v1.96, but the driving force behind its development was the complexity of Text Integration Utilities' (TIU's) document definition needs. Current security key capabilities were unable to efficiently manage the needs of clinical documentation (Discharge Summaries, Progress Notes, etc.).

### Person Class & User Class

A patch to ASU in the near future will provide a mapping between a subset of the exported User Classes and the Person Class File — for each Person Class, there will be a corresponding User Class. This mapping will help you "autopopulate" User Class Membership, will help assure that future changes to an individual's Person Class Membership are reflected automatically in his User Class Membership, and allow resolution of privileges for inter-facility access to data.

### **ASU Features & Benefits**

- ASU lets you define, populate, and retrieve information about User Classes. These User Classes can be defined hospital-wide or more narrowly for a specific service and can be used across VISTA to replace and/or complement keys.
- ASU lets you link user classes with orders and order events or with TIU Document Definitions and document events. This part of ASU defines behavior for orders and TIU documents only. In a future version, it may be extended to define behavior for other clinical entities.
- The User Class Membership file is a relational file which allows a many-to-many relationship to be defined between User Classes and their members (as defined in the New Person File (#200)).
- Membership in classes may be scheduled for automatic transition to other classes (e.g., the PGY1 Residents will rotate on June 30<sup>th</sup>, and will become PGY2 Residents as of July 1<sup>st</sup>).
- The Authorization/Subscription file (#8930.1) is another relational table, linking actions or events (e.g., Signature) with Document Definitions (e.g., Clinical Warning Note), record statuses, user classes (e.g., Provider) and user roles (e.g., Author, Expected Signer, Expected Cosigner, etc.). In this manner, a "Knowledge Base" or table of "Production Rules" can be developed in compliance with the site's local by-laws (or in some cases, national requirements) for handling of various elements of the medical record. This eliminates the need for "hard-coding" business rules within the application, thereby enforcing policies, independent of the local facility's preferences. These rules are also "inherited" through both the User Class and Document Definition hierarchies.
- ASU imposes no limitation on the depth or specificity of the User Class hierarchy which a site may choose to develop.

## **Chapter 2: Software and Documentation Conventions**

### **About This Manual**

This manual contains a description of the ASU package and all the ASU options. A glossary, index, and appendices are located at the end of this manual and contain added information and guidance for the user. The appendices contain lists of the user classes and business rules exported with TIU/ASU.

### Intranet

Documentation for this product is available on the intranet at the following address:

http://www.vista.med.va.gov/softserv/clin\_bro.ad/index.html
This address takes you to the Clinical Products page where you will find a listing of all the clinical software manuals. Click on the Authorization/Subscription Utility link and it will take you to the ASU Homepage. You can also get there by going straight to the following address: http://www.vista.med.va.gov/softserv/clin\_bro.ad/ASU/index.html

Remember to bookmark this site for future reference.

## **Special Instructions for the new VISTA Computer User**

If you are unfamiliar with this package or other Veterans Health Information Systems and Technology Architecture (**V**IST**A**) software applications, we recommend that you study the DHCP *User's Guide to Computing.* This orientation guide is a comprehensive handbook for first-time users of any **V**IST**A** application to help you become familiar with basic computer terms and the components of a computer. It is reproduced and distributed periodically by the Kernel Development Group. To request a copy, contact your local Information Resources Management Service (IRMS) staff.

### **Documentation Conventions**

### <Enter>

This symbol is used throughout the manual in computer screen dialogues to indicate the Enter, RETURN, or  $\[ \downarrow \]$  key. Press it after every response you enter or when you wish to bypass a prompt, accept a default (//), or return to a previous action.

### **Option examples**

Menus and examples of computer dialogue that you'll see on your terminal are shown here in boxes.

```
Select User Class Management Option: 1 User Class Definition
Select User Class Status: ACTIVE// <Enter> Active ?
   Active All User Classes
   Inactive
Enter selection(s) by typing the name(s), number(s), or
abbreviation(s).
   Start With Class: FIRST// <Enter>
   Go To Class: LAST// <Enter>
```

## **User responses**

In computer dialogues, user responses are shown in boldface type.

```
Select NEW PERSON NAME: GRIN, JON
```

#### **Icons**

Icons used to highlight key points in this manual include:

Indicates especially important information.

## **Package Conventions**

### **Defaults (//)**

Defaults are responses provided to speed up your entry process. They are either the most common responses, the safest responses, or the previous response. Examples:

*Most common*: Enter the ending date: NOW//

Safest: Do you wish to delete the entire entry: NO//
Last entered Enter the Provider Name: WELBY,DOCTOR//

To accept the response, press the **<Enter>** key.

To enter a different response, type in your preferred answer.

### **Up-arrows** (caret or a circumflex)

A single up-arrow does several functions in the package depending on where you are and what you are doing.

The up-arrow can terminate a series of questions and return you to a previous level.

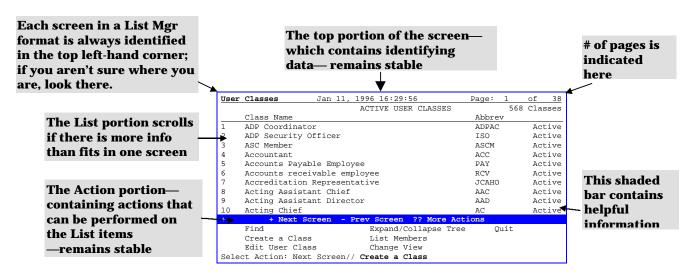

^^ Two up-arrows exit you out of the option you're in and return you to the menu.

## **Online Help**

**?,???** Online help is available if you enter one, two, or three question marks at a prompt. One question mark elicits a brief statement of what information is appropriate for the prompt; two question marks will get you more help, plus the hidden actions shown above; and three question marks will provide more detailed help, including a list of possible answers, if appropriate.

## **List Manager Screen Display**

ASU uses the List Manager utility which allows TIU (and other applications) to display a list of items in a screen format. If the list is longer than one screen, the header and action portion of the screen remain stable, while the center display scrolls. So if there are too many user classes to fit within the scrolling portion of the screen, pressing the return key causes that portion of the screen to scroll up while the top and bottom stay unchanged.

The List Manager utility then lets you:

- browse through the list
- select items that need action
- take action against those items
- select other actions without leaving the option

At the Select Action prompt, type the name or abbreviation of the action you wish (Find, Create a Class, Edit a Class, etc.) or the number

of the item in the middle portion of the screen (Class Name), after which you will be prompted to enter the Action.

**Shortcut**: Type the action abbreviation, then the number of the user class on the list (Example: ED=1 will process entry 1 for Edit) or vice versa. Type the item # followed by an equals sign (=) and the Action or its abbreviation ("1=L" will produce a List of members of the ADP Coordinator user class).

## Other (hidden) Actions

If you enter two question marks (??) at the Select Item(s) prompt, you will see a list of more actions that you can use with ASU.

```
Select Item(s): Quit// ??

The following actions are also available:
+ Next Screen UP Up a Line GO Go to Page
- Previous Screen DN Down a Line RD Re Display Screen
FS First Screen > Shift View to Right PL Print List
LS Last Screen < Shift View to Left ADPL Auto Display(On/Off)

Press RETURN to continue or '^' to exit:
```

.

**Chapter 3: How to Define and Manage User Classes** 

ASU Menus and options

**Chapter 4: How to Add, Edit, and Manage Business Rules** 

**ASU User Manual** 

## **Chapter 3: Defining and Managing User Classes**

Authorization/Subscription Utility (ASU) assists IRM staff, Clinical Coordinators, and other managers in defining and populating a User Class Hierarchy which is useful for identifying the roles that different users fulfill within the hospital. It also lets you specify business rules for the handling of documents by members of such groups. You can link user classes with orders and order events or with TIU Document Definitions and document events. This version of ASU defines behavior only for Text Integration Utility (TIU) documents and for orders through the Computerized Patient Record System (CPRS). In a future version, it may be extended to define behavior for other clinical entities.

A routine for seeding the User Class Membership file (USRPROV) can be started through the option, *Initialize Membership of User Classes* [USR INITALIZE MEMBERSHIP]. This option populates the Provider User Class, based on membership in the Provider file. It should be run ONCE when first implementing ASU.

User classes can also be populated through options described here. Class members may be active or inactive. Events such as ordering or signing can be linked with Document/Order type (e.g., Clinical Warning Note) with user classes (e.g., Provider Class).

Infinite hierarchies of subclasses can be created and one level of document type can inherit authorizations from a higher level.

For example, if an entry in the Authorization/Subscription file states that the user class, Physician, may sign Progress Notes, and if Service Chief is a subclass, then Service Chiefs may also sign Progress Notes.

## **Defining and Managing User Classes contd**

### **Keep it Simple!!**

ASU is exported with pre-defined sets of Document Classes and Business Rules, and we offer some simple tools or suggestions for populating the basic User Classes (i.e., PROVIDERS, and MIS personnel) required for the "least restrictive" implementation of TIU. We recommend that you first implement TIU and ASU with these as your baseline rules and classes. As you gain familiarity with the package and begin to recognize areas where more control of access is appropriate, then you can think about defining a necessary and sufficient set of Rules and/or User Classes to handle your site requirements. Your guiding principles should be: "Keep it simple—keep it open" to the extent possible. Don't impose restrictions on your users until you really have justification to do so. If you burden yourself with complexity too soon, you may pay a premium in unnecessary maintenance overhead and confusion.

### **Some General Guidelines**

- Since user class membership includes members of all subclasses, users should be made members of the most specific class in a hierarchy of classes. For example, if Dr. Jones is a dentist, she should be entered as a member of the Dentist class. Since Dentist is a subclass of the Provider class, Dr. Jones is then automatically a Provider.
- Distribute as much of the workload for identifying group membership as possible. Your facility's Administrative Officers and Service Chiefs can probably direct you to the people in their departments who are already maintaining personnel rosters (frequently on paper). These are the ideal people to assist you in populating the User Class Membership at your site. Depending on their level of familiarity with VISTA, you may even want to give them access to the USR LIST MEMBERSHIP BY CLASS option, along with appropriate training as to its use.
- Persons wearing several different hats can have concurrent membership in more than one User Class. For example, Mr. Smith might be a dietitian also working toward a nursing degree. He can be entered as a member in two User Classes, once as a Dietitian and once as a Student Nurse.

## **Process for creating user classes:**

1	Populate basic user classes with the exported user class file
2	Finish implementation of TIU and get acquainted with the package, as well as the needs of your facility
3	Define additional user classes
4	Add members to user classes
5	Modify (add or delete) user classes and their members, as needed
6	Create or edit Business Rules

**ASU Menu and options** 

Option	Option Name	Description
User Class Definition	USR CLASS DEFINITION	This option allows review, addition, editing, and removal of User Classes.
List Membership by User	USR LIST MEMBERSHIP BY USER	This option allows review, addition, editing, and removal of individual members to and from User Classes.
List Membership by Class	USR LIST MEMBERSHIP BY CLASS	This option allows review, addition, editing, and removal of individual members to and from User Classes.
Show Class Membership	USR SHOW MEMBERSHIP	This menu option, which contains the two options listed below, can be assigned to users who only need to view membership.
Show Membership by User	USR SHOW MEMBERSHIP BY USER	This option lists the User Classes that an individual is a members of.
Show Membership by Class	USR SHOW MEMBERSHIP BY CLASS	This option allows review only of members of selected User Classes.
Edit Business Rules	USR EDIT BUSINESS RULES	This option allows the user to enter Business Rules authorizing specific users or groups of users to perform specified actions on documents in particular statuses (e.g., an UNSIGNED PROGRESS NOTE may be EDITED by a PROVIDER who is also the EXPECTED SIGNER of the note, etc.).
Manage Business Rule	USR BUSINESS RULE MANAGEMENT	This option allows you to list the Business rules defined by ASU, and to add, edit, or delete them, as appropriate.

## Populate imported user classes

A basic set of user classes is exported with the ASU package. Use the option *Initialize Membership of User Classes* (on the TIU Conversion Menu) to populate the Provider User Class and the most common subclasses with your local clinicians. Work with Administrative Officers and Service Chiefs to identify Students and MIS Staff, and set them up as members of the appropriate classes.

Finish implementation of TIU and get acquainted with the package, as well as with the needs of your facility

We recommend that you first implement TIU and ASU with the exported rules and classes as your baseline rules and classes. As you become more familiar with the package, then you can plan additional Rules and/or User Classes to handle the requirements of your site. Keep it as simple and open as you can. Avoid imposing unnecessary restrictions. ASU can handle an enormous spectrum of conditions and rules, but don't burden yourself with unnecessary complexity too soon.

## 3 Define user classes

You can add or modify classes, as needed, to meet your site needs. The option *User Class Definition* lets you add and delete classes. Then use the options *List Membership by User* and *List Membership by Class* to add individual members to these user classes.

When you begin to use ASU to develop a higher degree of control, keep the following in mind: Since user class membership includes members of all subclasses, users should be made members of the most specific class in a hierarchy of classes. For example, if Dr. Jones is a dentist, she should be entered as a member of the Dentist class. Since Dentist is a subclass of the Provider class, Dr. Jones is then automatically a Provider. Distribute as much of the workload for identifying group membership as possible. Your facility's Administrative Officers and Service Chiefs can probably direct you to the people in their departments who are already maintaining personnel rosters (frequently on paper). These are the ideal people to assist you in populating the User Class Membership at your site. Depending on their level of familiarity with **V**IST**A**, you may even want to give them access to the USR LIST MEMBERSHIP BY CLASS option, along with appropriate training as to its use.

Persons wearing several different hats can have concurrent membership in more than one User Class. For example, Mr. Smith might be a dietitian also working toward a nursing degree. He can be entered as a member in two User Classes, once as a Dietitian and once as a Student Nurse.

### **User Class Definition Option**

Steps to Use Option:

- **1.** Select the option *User Class Definition* from the User Class Management menu.
- **2.** Select the user class status— active, inactive, or both.
- **3.** Select the starting and ending classes you want displayed.

```
Select User Class Status: ACTIVE// ?

Active All User Classes
Inactive
Select User Class Status: ACTIVE// <Enter>
Start With Class: FIRST//<Enter>
Go To Class: LAST// <Enter>
Searching for the User Classes....
```

**4.** The User Classes within the parameters you selected are displayed.

### **Actions**

### **FIND**

Allows users to search list of USER CLASSES, MEMBERS, or BUSINESS RULES for a text string (word or partial word) from current position to the end of the list. Upon reaching the end of the last page of the list, the user will be asked whether to continue the search from the beginning of the list through the origin of the search.

#### CREATE A CLASS

Lets authorized users create new user classes.

#### EDIT USER CLASS

Allows authorized users to edit selected reports online. When electronic signature is enabled, physicians will be prompted for their signatures upon exit, thereby allowing doctors to review, edit and sign as a one-step process.

### EXPAND/COLLAPSE TREE

Allows you to select a user class and see its subclasses and members;. You can collapse an expanded tree to just show the user class name.

#### LIST MEMBERS

Allows you to select a user class and then see all the members of that class.

#### **CHANGE VIEW**

Allows users to modify the list of reports by signature status, review screen and dictation date range without exiting the review screen.

### QUIT

Allows user to quit the current menu level.

### The following actions are also available:

```
+ Next screen UP Up a Line GO Go to Page
- Previous Screen DN Down a Line RD Re Display Screen
FS First Screen < Shift View to Left PL Print List
LS Last Screen > Shift View to Right ADPL Auto
Display(On/Off)
```

- 7. Select the action Create a Class.
- **8.** Enter a new user class name.

## 4

### Add members to user classes

## **List Membership by User**

In this option, you select a user and the program shows you what classes the user belongs to. You can then review, edit, or remove individual members of user classes, or add new members.

```
Select User Class Management Option: 2 List Membership by User Select USER: ?
Answer with NEW PERSON NAME, or INITIAL, or SSN, or NICKNAME, or DEA#, or VA#
Do you want the entire 109-Entry NEW PERSON List? n (No)
Select USER: Russ, Joe E. JER
Searching for the User Classes.
```

## **Action Definitions**

Action	Description
Next Screen	If multiple screens of information are available, this will page to the next screen.
Previous Screen	If multiple screens of information are available, and you are not on the first screen, this will allow paging back to the previous screens, one at a time.
First Screen	If multiple screens are available, this will page to the first screen.
Last Screen	If multiple screens of information are available, this will page to the last screen.
Search List	Lets you search a list of User Classes for a text string (word or partial word) from current position to the end of the list. Upon reaching the end of the last page of the list, you are asked whether to continue the search from the beginning of the list through the origin of the search.
Create A Class	Lets authorized users create classes online.
Edit User Class	Lets authorized users edit selected classes online.
Expand/Collapse Tree	Lets you see subclasses of a class, or go back to the class level if you're in a subclass.
Change View	Lets you modify the list of reports by signature status, review screen and dictation date range without exiting the review screen.
Quit	Lets you quit the current menu level.

# **Example: Assigning Medical Record Technicians and Chief, HIMS to user classes.**

- **NOTE:** These titles may vary from site-to-site. Check to see which titles correspond to MRT and HIMS at your site (e.g., HIMS=MIS).
  - 1. To identify the users who should be allocated to the CHIEF, HIMS and MEDICAL RECORD TECHNICIAN classes, get a list of MRTS and transcriptionists from the HIMS office.
  - **2**. Start assigning members to classes through the *List Membership* by *Class* option on the User Class Management Menu, as shown in the example below.

```
Select TIU Maintenance Menu Option: 3 User Class Management
--- User Class Management Menu ---

1 User Class Definition
2 List Membership by User
3 List Membership by Class
4 Edit Business Rules
5 Manage Business Rules
Select User Class Management Option: 3 List Membership by Class
Select CLASS: MRT MEDICAL RECORDS TECHNICIAN
Searching for the User Classes.

## **Chapter 4: Adding, Editing, and Managing Business Rules**

Business Rules authorize specific users or groups of users to perform specified actions on documents in particular statuses (e.g, an UNSIGNED PROGRESS NOTE may be EDITED by a PROVIDER who is also the EXPECTED SIGNER of the note, etc.).

A set of Business Rules is exported with ASU. Sites can modify or add to these rules, to meet their own local needs. Examples on the next few pages demonstrate basic use of the two options, *Edit Business Rules* and *Manage Business Rules*. The second option is also known as the ASU Rule Browser, as it lets you look at all of the defined rules by several categories: Document, User Class, and User Role. You can then add, edit, or delete rules, if you are authorized.

### **Edit Business Rules**

This option lets you enter or edit Business Rules authorizing specific users or groups of users to perform specified actions on documents in particular statuses (e.g, an *unsigned progress note* may be *edited* by a *provider* who is also the *expected signer* of the note).

**NOTE:** Enter two question marks (as shown in the examples) to get help on prompts.

**Example 1: Editing a business rule for a cosigner** 

```
Select User Class Management Option: EDIT Business Rules
Please edit a Business Rule:
Select DOCUMENT: RADIOLOGY
    1 RADIOLOGY IMPRESSION COMPONENT
2 RADIOLOGY NOTE DOCUMENT CLASS

```

**SOUTE:** Your site might redefine the User Classes so that Nursing Supervisor is under the User Class Nurse. In this case, steps 8 and 9 in the above example wouldn't be necessary.

### **Status List**

**NOTE**: This list of statuses may be added to as additional document types are incorporated.

Status	Symbol	Sequence	Description
Amended	a	45	The document has been completed and a
			privacy act issue has required its
			amendment.
Completed	С	35	The document has acquired all necessary
			signatures and is legally authenticated.
Deleted	d	47	The document has been deleted but the audit trail is retained.
Incomplete	Any	105	This status applies to document
<b>F</b>	J		definitions only.
Purged	р	50	The grace period for purge has expired
	_		and the report text has been removed
			from the online record to recover disk
			space. NOTE: only completed documents
			may be purged. The chart copy of the
			document should be retained for archival
		2.0	purposes.
Uncosigned	u	30	The document is complete, with the
			exception of cosignature by the attending
Undicatated	d	5	physician.
Undicatated	a	3	The document is required and a record has been created in anticipation of
			dictation and transcription, but the
			system hasn't been informed of its
			dictation.
Unreleased	r	15	The document is in the process of being
			entered into the system, but hasn't been
			released by the originator (i.e., the person
			who entered the text online).
Unsigned	\$	25	The document is online in a draft state,
			but the author's signature hasn't yet been
			obtained.
Untranscribed	t	10	The document is required, and the system
			has been informed of its dictation, but the
			transcription hasn't yet been entered or
		2.0	received by upload.
Unverified	v	20	The document has been released or
			uploaded, but an intervening verification
			step must be completed before the
			document is displayed.

## Relationship of user classes, document types, and business rules

The table below illustrates which users can perform which actions on a document or object in its current state. In addition, the structure is designed to accommodate the case where a given action may be performed on its object, but a followup action is required (e.g., a Medical Student may sign his own Progress Note, but will be prompted to name the expected cosigner, etc.).

Document	Status	Action	User Class	And	User Role
Type					
Anticoagulatio	unsigned	edit	Anticoagulation		
n Clinic			Clinic		
Clinical	untranscribed	entry	User		
Documents					
Clinical	unreleased	release from			Transcriber

**ASU User Manual** 

## **Helpful Hints**

#### **Shortcut**

Type the action abbreviation, then the number of the user class on the list (Example: ED=1 will process entry 1 for Edit) or vice versa. Type the item # followed by an equals sign (=) and the Action or its abbreviation ("1=L" will produce a List of members of the ADP Coordinator user class).

#### Q & A

- **Q:** When I edited a rule, the edited rule wasn't displayed, even though it said "Rule #2 edited" in the black bar.
- **A:** In changing the rule, you may have changed the User Class. Look at the top of the screen to see if you are in a different User Class than the one you started with. If so, you need to Change View to the new User Class.

#### **Troubleshooting & Helpful Hints for ASU Business Rules**

- 1. If a particular person should be able to do something governed by a particular Business Rule, but can't, check the following:
  - Make sure he/she is in the referenced User Class.
  - Check the business rule for the proper status.
  - Check that the document to be acted on is the one referenced by the rule or is a descendant of the document referenced by the rule. If the rule involves a User Role, make sure the person actually plays that role for the document.
  - Check to see if the rule has been overridden. If the same rule (same action and same status) is defined for a lower-level document, the lower level rule overrides the rule at the higher level. For example, suppose you are checking the rule, "An UNDICATATED PROGRESS NOTE can be ENTERED by a PROVIDER." You wonder why Dr. Jones, a Provider, can't enter a Nurse Practitioner Note, which is a descendant of Progress Notes. If there is a rule, "An UNDICTATED NURSE PRACTITIONER NOTE can be ENTERED by a NURSE PRACTITIONER," then the rule you are checking has been overridden for Undictated Nurse Practitioner Notes. Any User Classes who can enter Nurse Practitioner Notes must have their own explicit Business Rule at the Nurse Practitioner Note level. The easiest way to check for overriding rules is to do a FileMan print by the same Action and the same Status.
- 2. If a particular person should NOT be able to do something, but CAN, check the following:
  - That the person doesn't have inappropriate menus.
  - That he/she is not a member of inappropriate User Classes.
  - That the document involved is in the correct place in the document definition hierarchy.
  - Check any business rules for the given action, status, user role, and document or ancestors of the document.
  - Check to see if they have somehow been given an inappropriate role in relation to the document. For example, the person might mistakenly have been made the author when he/she isn't the author.

#### **More Information about ASU and User Class**

#### Relationship between User Class file and Person Class file

Although there are a number of superficial similarities between the User Class File (#8930) and Kernel's Person Class File (#8932.1), the files are structurally dissimilar, designed to serve completely different applications. In fact, the roles of the two files are analogous to those of the LABORATORY TEST File (#60) and the WKLD CODE File (#64).

The *User Class File* provides for the definition of a hierarchy of User Classes, flexible enough to describe the organizational structure of the local facility. To that end, it is designed to be both *general* and *extensible*, much in the same way that file 60 can be viewed as a "model" of the local laboratory's "catalogue" of tests and panels.

The Person Class File, in contrast, is designed to accommodate the HCFA National Provider System Taxonomy of Professionals/Occupations, which is an emerging industry standard for identifying the Occupations, Specialties, and Subspecialties to which Health Care Providers belong. This file is standardized across VHA, and cannot be extended to accommodate differences in local organizational structure. It is very useful, however, for inter-facility data transfer, where enterprise-wide consistency is the name of the game. The same role is fulfilled, in the case of laboratory tests, by file 64. This combination of locally extensible files which help to model the differences between facilities, mapped to national "nomenclature" files which help to impose a standard reference frame, has proven to be most useful on many occasions throughout **V**IST**A**.

#### Other Differences between User Class and Person Class

- User Class is *general*, allowing for identification of an array of non-Providers whose access to clinical applications must be accommodated and controlled (e.g., transcribers, file clerks, ward clerks, unit secretaries, hospital directors, etc.). The HCFA Taxonomy (and therefore the Person Class file) currently offers a very restricted subset of the administrative or clerical occupations required by the applications which ASU is designed to serve.
- User Class may be dynamically extended or revised to accommodate a
  wide variety of common organizational changes (e.g., product line
  reorganizations, site consolidations, etc.), with their attendant local
  variations.

#### Differences between User Class and Person Class cont'd

• The User Class file accommodates a true "object-class" hierarchy, which allows the definition of a set of locally controlled business rules, conferring privileges which may be defined for any level in the hierarchy, and "inherited" by members of all subordinate classes. For example, one such rule states that a User may view a completed Clinical Document, where User is the "root class" of the User Class Hierarchy, and Clinical Document is the root class of TIU's Document Definition hierarchy.

#### **Amount of Set-up for User Class & Business Rules**

#### **Initial Population of Basic User Classes**

In the initial implementation of TIU and ASU, it is **NOT** necessary to populate all of the exported user classes, or to allocate *every* **V***ISTA* user membership in *any* of the exported classes. Any users who are not allocated to a specific class will be treated as members of the root class USER. An option is provided to "seed" the PROVIDER class based on ownership of the PROVIDER Security Key.

MOTE: If your site has allocated the PROVIDER key to non-Providers in order to accommodate the requirements of the Ambulatory Care Data Capture package, we suggest that you review the holders of the key and de-allocate it from such users as necessary.

In the set-up section of this Guide, we illustrate how you might allocate members to the Medical Records Technician, Chief, MIS, and Transcriptionist classes. These are the only user classes whose membership must be allocated for basic implementation of TIU.

#### **Creation of Business Rules**

TIU and ASU are exported with a very general set of business rules, which should be sufficient for initial implementation. As stated earlier in this Guide, we recommend that you **keep the User Class file, TIU Document Definition Hierarchy, and Business Rule base as simple as possible** in your initial implementation. Once you have grown acquainted with the basic operation of these two complex packages, you might then begin to explore the more advanced levels of control that are possible in accordance with your site's HIM by-laws and concerns for the trade-off between access and confidentiality. Instructions for creating Business Rules are also provided earlier in this Guide.

## **Glossary**

Action A functional process that a clinician or clerk uses

in the ASU computer program; for example, "Edit."

An action is also called a protocol.

**Authorization** Who is AUTHORIZED to do something (for

example, sign and order).

**Business Rules** Business Rules authorize specific users or groups of

users to perform specified actions on documents in

particular statuses

Clinician A doctor or other provider in the medical center

who is authorized to provide patient care.

**Discharge Summary** A formal synopsis of a patient's medical care

> during a single hospitalization, including tests procedures, and conclusions. A discharge summary is prepared for all discharges and

transfers from a VA medical center or

domiciliary or from nursing home care. The automated Discharge Summary module of TIU provides an efficient and immediate mechanism for clinicians to capture transcribed patient discharge summaries online, where they're available for review, signing, adding addendum.

**Document Class** Classes group documents. For example, "Progress Notes"

> is a class with many kinds of progress notes under it. Classes may themselves be subdivided into further Classes and/or Document Classes. Besides grouping documents, Classes also store behavior which is then

inherited by lower level entries.

**Document Definition** Document Definition provides the building blocks

for TIU, by organizing the elements of documents in a hierarchy structure. This structure allows documents (Titles) to inherit characteristics (such

as signature requirements and print

characteristics) of the higher levels, Class and

Document Class.

#### Glossary, cont'd

#### **Progress Notes**

The Progress Notes module of TIU is used by health care givers to enter and sign online patient progress notes and by transcriptionists to enter notes to be signed by caregivers at a later date. Caregivers may review progress notes online or print progress notes in chart format for filing in the patient's record.

#### **Subscription**

A group of persons who *subscribe* to receive something; for example, an Attending physician receives a resident's unsigned Discharge Summary on his/her list of Unsigned Discharge Summaries. (Subscription is not included in this version of ASU)

#### TIU

Text Integration Utilities, a **V**IST**A** document management application.

#### **User Class**

User Classes and sub-classes (e.g., Provider, physician, transcriptionist, Medical Record Technician, MIS Manager, Medical Student, Nurse, Resident, etc.) are defined in the User Class File (8930), which is the principal foundation for ASU. Responsibilities and privileges (for signing, cosigning, editing, etc.) are defined through this file.
